

# LAB ASSIGNMENT 4

Created an Android Application which allows the user to speak and then converts the speech into text using an API "<http://mycaption.com/resources/api>". This API is used for converting Speech to Text.

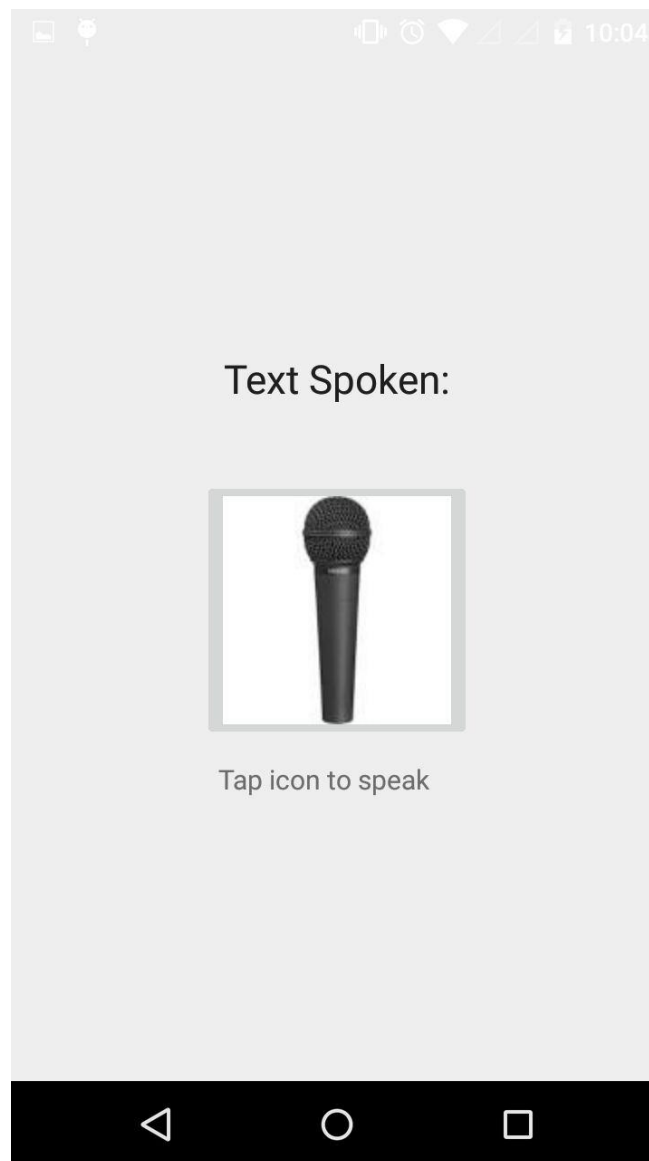

Also the app has login page, on successful login the application redirects to the speech to text conversion page which are demonstrated as below.

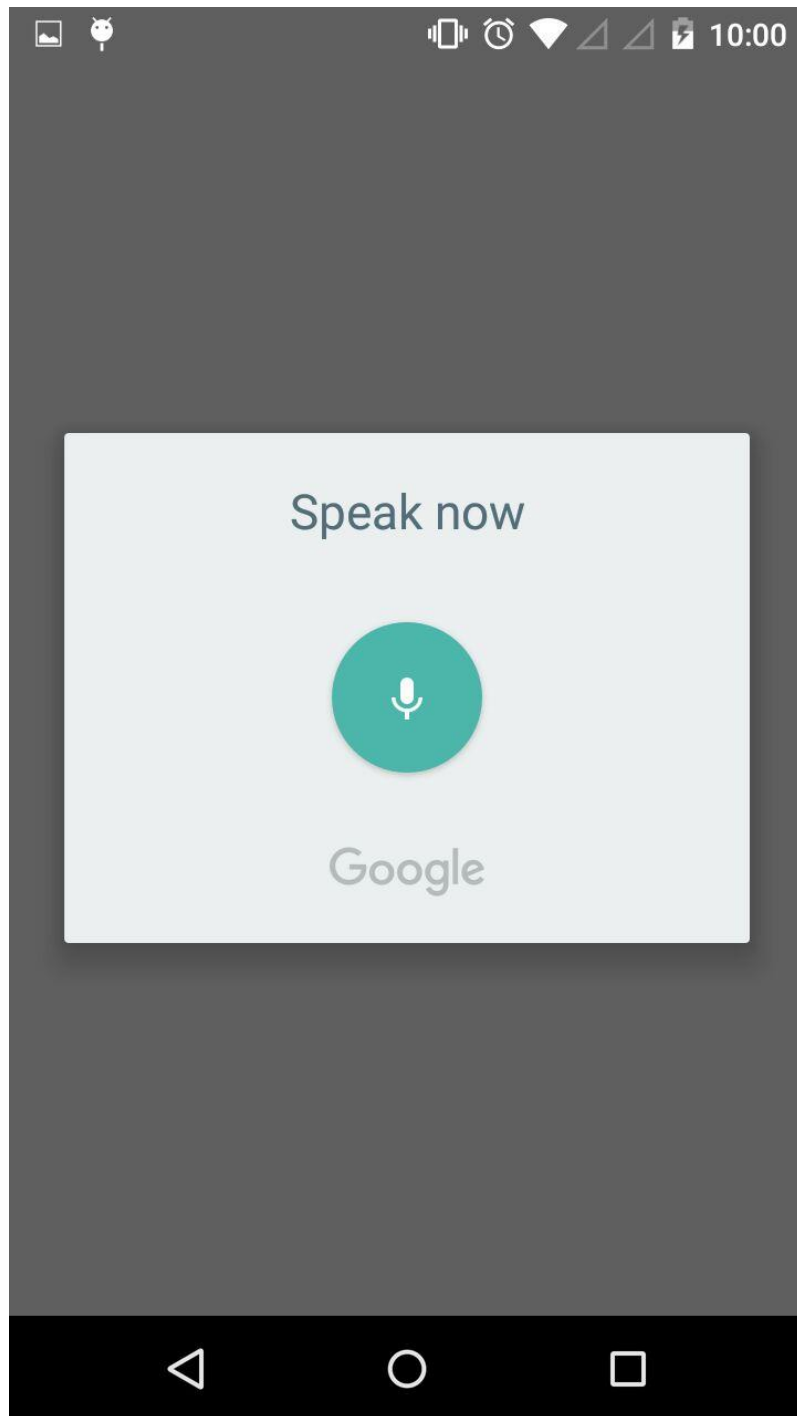

Login will be successful only for particular Username and password, else it will display an error message.

On successful login, the app is redirected to the below image where speech to text conversion happens.

On tapping the mike icon, the below screen is displayed, where the user has to speak.

After completing the speaking of the user, the below screen is displayed where the speech is converted to text and displayed correctly.
